

## TransGlobal's Mobile Biometric Fingerprint Capture Solution

Our company provides a comprehensive solution to securing a person's identity. Our unique software combined with the state-of-the-art hardware assures a secure and successful transition between an individual and the secured system they access. We integrate biometric technology in to your existing security systems to ensure every component of your system and data is in encrypted form and only accessible by the right user. Our biometric solution equips managers, Public Safety officials, and law enforcement officers and those specialized agencies with an innovative biometric sensor that can be used to scan identify and record a person's finger print on the fly. It uniquely identifies the fingerprint and then stores the information in a secured database that is only accessible if you have the right personal identity to access the database. What makes this system so unique is that you can scan multiple fingers to ensure you can confirm an accurate finger print and identify the person of interest. The algorithm we use are unique in that have been specifically designed and written to interact with this special biometric chip. Our software is built into the application and stores the executable application directly on the flash drive so there is no need to install software on your desktop.

The drive is a portable, fingerprint accessible USB-enabled hard drive that incorporates biometric scanning, using a 128 bit encryption, which has disc space up to 2 gigabytes and its exclusive proprietary operating system software. The drive provides the user with a personal, portable and secure biometric scanner that is capable of collecting data to identify individuals. This drive is portable and can be attached to a belt loop for easy access or simply be carried in a pocket.

### The biometric scanning device provides the following features and benefits to the user:

- Accessed by user's unique fingerprint
- Stores web browser bookmarks
- Stores Username and Passwords for internet sites
- Stores Address Book
- File Storage
- Send and Receive email from multiple email accounts
- Encryption Safe Box – Encrypt each file with 128 bit encryption
- Set individual user properties for Backup, Restore and Options
- Leaves No Trace Behind – Device can be set to erase all of the temporary files, cookies, histories and URLs on the PC after use
